North Carolina
2003 Youth Tobacco Survey (YTS)

HIGH SCHOOL FACT SHEET

The North Carolina YTS includes data on the prevalence of cigarette and other tobacco products as well as information on tobacco use, environmental tobacco smoke (ETS), cessation, pro-health media, tobacco advertising, school tobacco prevention education, community participation, and access and availability of tobacco products. These areas are critical components that North Carolina should include in a comprehensive tobacco control program.

The North Carolina YTS was a public school-based survey of students in grades 6-12, conducted in 1999\(^1\), 2001 and 2003. A multi-stage cluster sample design was used to produce representative data for middle and high school students for all of North Carolina. Schools were selected with the probability proportional to enrollment size. Classes were randomly selected and all students in selected classes were eligible to participate. The 2003 YTS school response rate was 91.4\%, the student response rate was 84.7\% and the overall response rate was 77.4\%. A total of 3261 high school students participated in the North Carolina YTS in 2003.
