The North Carolina YTS includes data on the prevalence of cigarette and other tobacco products as well as information on tobacco use, environmental tobacco smoke (ETS), cessation, pro-health media, tobacco advertising, school tobacco prevention education, community participation, and access and availability of tobacco products. These areas are critical components that North Carolina should include in a comprehensive tobacco control program.

The North Carolina YTS was a public school-based survey of students in grades 6-12, conducted in 1999, 2001, 2003 & 2005. A multi-stage cluster sample design was used to produce representative data of middle and high school students for all of North Carolina. Schools were selected with the probability proportional to enrollment size. Classes were randomly selected and all students in selected classes were eligible to participate. The 2005 YTS school district response rate was 98.9%, the student response rate was 81.89% and the overall response rate was 81.0%. A total of 3265 middle school students participated and completed the North Carolina YTS in 2005.

**Prevalence**
32.8% of students had ever used any tobacco product (White 31.1%; Black 35.4%; Hispanic 36.9%)2
